Re: **US v Henry P. Steeneck**

07cr929

Your Honor:

Herewith, please find an update that I have received from Dr. Rosner in regards to Mr. Steeneck's current medical condition. Please note that I have received same by way of hand delivery of Mr. Steeneck's father late afternoon Friday June 20, 2008. It appears that Dr. Rosner's letter was incorrectly dated.

It has been explained to me that the current treatment involves both measures being taken to avoid a future hemorrhage as well as tests to confirm that the shunt is working. I am expecting a more detailed letter with a course proposed of treatment today from Dr. Rosner and will advise.

Sincerely,

Charles J. Diven, Jr., Esq.

White Plains, NY 10601

RE: Henry Steeneck

Dear Judge Karas:

Henry Steeneck underwent replacement of his ventriculoperitoneal shunt at the end of May 2008. He initially did very well following the surgery and his surgery was entirely uncomplicated. Unfortunately after his discharge, he developed a delayed hemorrhage around the shunt insertion site, which resulted in new onset of seizures, which precipitated his readmission to the Intensive Care Unit at Hudson Valley Hospital. He has since been discharged from the hospital on antiseizure medication.

At present, he requires close followup, both of his wounds and his clinical status vis-à-vis the seizures. He will undergo an EEG to assess his seizure status and I will follow him closely for wound healing and neurological examination. I plan to reevaluate and then follow up in six days and of course, I will keep you updated on his progress.

Sincerely,

Saran S. Rosner, M.D.
